**Are you managing a records program with software components from a variety of vendors?**

**Different vendors, software updates, and incompatible applications can present a constant set of challenges...**

# Intersect Systems puts it all together!

**Intersect Systems offers a comprehensive, integrated, state-of-the-art software system for records management that provides retention schedule development, records management, document indexing and management, global editing, and workflow management in one package!**

● *Records Retention*

Develop, publish, and manage records control schedules for your Local Government with Intersect's *Retention Schedule Manager*, which includes the Texas Retention Schedules for Texas Local Governments in digital format with easy-to-use text editor. Submit your changes directly to the Texas State Library and Archives, Local Government Division for approval; Intersect's printed output has been approved by the Local Government Division as a substitute SLR-500 form.

● *Records Management*

Use Intersect's RCAMS *Records Control and Management System* to manage your records, including retention; legal, audit, and historical holds; powerful search and query tools for locating records; check-outs and returns; destruction sign-offs and processing; and much more...

● *Document Management*

Index electronic documents into RCAMS with Intersect's *Image Manager* in tif, pdf, png, jpg, gif, and pcx formats; includes template features to minimize keyboarding, and numerous indexing functions that reduce keystrokes and allow indexing while viewing each image. Easily locate, view and print documents.

● *Workflow Extensions*

Intersect's *Accession* and *Accession Monitor* allow departments to look up their records on-line and send records requests and records transmittals to the records office with simple point-and-click operations. Intersect's *Image Viewer* allows departments on-line access to quickly locate, view, and print, imaged documents.

● *RCAMS SQL Database*

Intersect's optional *RCAMS SQL* is designed for enterprise-scale records management for Microsoft® SQL Server™ databases, with support for transaction logging, scheduled backups, device mirroring, automatic fail-over options for full redundancy, and tight integration with Windows XP Security.

● *Many Other Features...*

Intersect's *Global Editor* and *Data Mapping and Indexing* utilities support comprehensive editing tasks, as well as indexing images into RCAMS that have been scanned and indexed with other systems; Intersect's *Accession / Image Viewer* supports remote access to imaged documents; and Intersect's RCAMS *Law Enforcement* extensions uniquely support Texas Law Enforcement agencies' needs for records management, including time-critical, dependable access to documents.

*Available through ICT Cooperative Contracts program in Texas. Call Intersect today at (972) 641-7747 or (972) 641-4445 e-mail us at intersect@newintel.com ● visit our web site at www.intersectsystems.*
